

Impact Beds

Luff's Impact Beds are built tough to handle the harshest loading conditions without sacrificing ease of use. Featuring high-performance urethane bars and a unique slide-out frame design, they deliver unmatched protection, reduced downtime, and longer wear life.

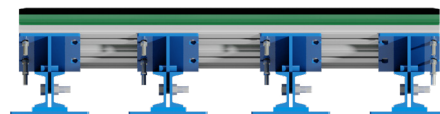

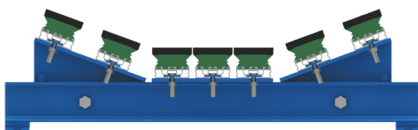

Unique Slide-Out Design: Innovative frame allows bars to slide out in two sections, there is no need for full bed removal. Simply unbolt, slide, and replace. Slide-out bar access means faster, safer maintenance with minimal downtime.

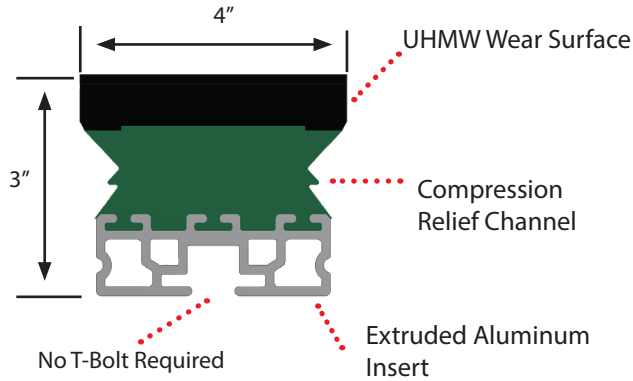

Enhanced Sealing Surface: Flat bar tops provide better skirt sealing than traditional impact idlers, helping contain material and reduce spillage.

Advanced Impact Absorption: Urethane bars are specifically formulated to absorb and disperse impact energy, preventing rebound and reducing damage to your conveyor structure.

Space Saving Customization: Ideal for space-restricted loading zones, custom and low-profile options are available.

Conveying Performance

Advanced Impact Absorption: Urethane bars are specifically formulated to absorb and disperse impact energy, preventing rebound and reducing damage to your conveyor structure.

Heavy-Duty Aluminum Inserts: Each impact bar includes an extruded aluminum insert for strength and durability. Designed to accept standard ½" Grade 5 bolts and washers for quick and cost-effective bar replacement.

Energy-Dispersing Profile: The side profile of each bar disperses kinetic energy instead of reflecting it, which prevents premature wear.

Secure UHMW Cap: UHMW top cap is mechanically attached for long-lasting surface protection.

*Impact Bars available in
standard lengths of
18", 48", 60" and 72"*
